PAPERCUT + HERITAGE MANAGED PRINT FOR EDUCATION

From browser access for students and staff to mixed platform support, PaperCut can handle the unique challenges of school networks. Flexible group level controls including monitoring, quotas, charging, print job filtering, and hold/release queues allow you to precisely manage your print resources.

Rule Based Printing

You can set an upper document size to stop unusually large print jobs. Other filters include a maximum number of copies, color, and duplex printing. There is even a filter to stop "double submitted" jobs caused by accidentally clicking the print icon twice.

Secure Release and "Follow Me"

In a standard printing environment, a user's jobs are sent directly to the printer for immediate printing. This results in wasted paper and toner when printing is forgotten and not collected. It also presents a security risk if those forgotten jobs were sensitive or confidential. PaperCut print release provides a simple solution that places jobs in a holding state until the user authenticates and releases the job at the printer.

Automatically convert print jobs to grayscale and duplex.

Previously, PaperCut could only disallow all single sided and color printing jobs on a printer, but now jobs can be automatically converted to duplex and/or grayscale. For instance, always force students, faculty, and staff to print duplex or use conditional scripting to automatically convert all Outlook Email messages to grayscale.

Track your school or universities printing and copying usage with real-time reporting.

Upon completion of each copy session (when the user presses end) the details of the copy transaction are logged into PaperCut in real-time. Provision for network failure is provided enabling session replay from memory. Administrators have access to the same PaperCut reporting and management features as they would have for a standard printer. Print from anywhere with PaperCut's embedded Web Print solutions. As a core feature of PaperCut, Web Print enables printing from user-owned devices without the overhead of installing printer drivers and managing server authentication. Web Print is PaperCut's unique and industry leading solution to manage the growing need for printing from wireless device.
